

# *CAHs, Quality Measurement and MBQIP*

Ira Moscovice

Mayo Professor and Director

University of Minnesota Rural Health Research Center

Presented at the

NRHA Annual Meeting

Austin, Texas

May 5, 2011

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

**Flex** | University of Minnesota

## *Overview of Presentation*

---

- Rural relevant quality measures
- Why public reporting of quality measures is important for CAHs
- Using quality measure results to improve quality of care in CAHs

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

Flex  
Monitoring  
Team

University of Minnesota

University of Southern Maine

## *CAH Reporting to Hospital Compare*

---

- 71% of CAHs publicly reported data on at least one inpatient process measure for 2009
- By state, CAH reporting on inpatient measures ranges from 11% to 100%
  - Six states with 100% of CAHs reporting
  - Six states with less than half of CAHs reporting
- 16% of CAHs publicly reported outpatient data
- 35% of CAHs publicly reported HCAHPs data

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

## *Reasons given for not reporting to Hospital Compare*

---

- It's only the small states that have high CAH participation
- The measures are not “rural relevant”
- We have our own quality measurement system
- CMS does not require CAHs to participate

## *It's Not Just the Small States*

- It's not just the states with few CAHs that have high Hospital Compare participation rates...
- Several states with large numbers of CAHs have very high participation rates:

Wisconsin 96.6% of 59 CAHs	Oklahoma 90.9% of 33 CAHs
Nebraska 93.8% of 65 CAHs	Iowa 86.6% of 82 CAHs
Minnesota 93.7% of 79 CAHs	
- Statewide quality reporting initiatives, efforts by State Flex Programs/SORHs, QIOs, and state hospital associations make a difference in CAH participation

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

University of Southern Maine

# *Rural Relevance of Quality Measures*

---

- Current work:
  - Evaluating the relevance of the current and proposed CMS outpatient quality measures
  - Developing an up-to-date list of rural relevant inpatient quality measures for CAHs

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

Flex  
Monitoring  
Team

University of Southern Maine

## *Criteria for Assessing Rural Relevance*

---

- Prevalence/volume in CAHs
- Usefulness
  - Internal usefulness for QI processes
  - External usefulness for public reporting and for value-based purchasing
  - Usefulness for care coordination
- Ease of data collection
  - Calculation using claims data
  - Effort required for medical record abstraction
  - Feasibility of using EHRs

## *CMS Current and Proposed Outpatient Measures*

---

- Emergency Department (ED)
- Outpatient Surgery
- Imaging (e.g., CT scans, mammography)
- Structural measures (e.g., use of health information technology)
- Measures for specific clinical conditions: diabetes, cancer, and heart failure
- Other measures (e.g. vaccination, medication reconciliation)

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

University of Southern Maine

## *Rural Relevance of Outpatient Measures*

---

- Current AMI/chest pain measures and transfer communication measures being considered by CMS were developed for and field-tested in rural hospitals
- Several new ED measures for 2013 address ED waits and timeliness of care; overcrowding and wait times are not as much of a problem in rural EDs as in urban EDs
- New transition record measure is rural relevant

## *Rural Relevance of Outpatient Measures*

---

- Imaging measure issues/concerns
  - Scientific basis not clear in some cases
  - Some measures are not endorsed by NQF
  - Responsibility of hospital vs. ordering physicians?
  - Procedures done in many small rural hospitals, but volume is still relatively low
  - Focus on utilization rates rather than quality?

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

University of Southern Maine

## *Rural Relevance of Outpatient Measures*

---

- Condition-specific measures address diabetes, heart failure and cancer
- Most are PQRI measures and endorsed by NQF
- These are common OP diagnoses in rural hospitals, but patients are not necessarily seen in the hospital OP department for the services addressed by these measures
- What are the roles of the OP department, primary care physicians, and specialists in providing these services?

University of Southern Maine

## *Rural Relevant Inpatient Measures*

---

- Analyzed several sets of measures on important rural hospital quality measurement topics identified in earlier University of Minnesota/Stratis Health work and NRHA meeting on quality metrics
  - CMS Hospital Compare, hospital acquired conditions, and HIT meaningful use measures
  - NQF endorsed measures
  - AHRQ measures
- Used Hospital Compare data, AHRQ discharge data and literature to assess prevalence/volume in CAHs

University of Southern Maine

## *Rural Relevant Inpatient Measures*

---

- Assembled expert work group to review and rate the quality measures
- Core measures that are relevant for all CAHs
  - Inpatient process of care measures for specific medical conditions (e.g., pneumonia, heart failure)
  - Cross-cutting measures (e.g., HCAHPS, medication reconciliation, care transitions)
- Measures for CAHs that offer surgery and obstetrics

## *Why CAHs Should Publicly Report Quality Data*

---

- Public reporting of quality data provides an important opportunity for CAHs to assess and improve their performance on national standards of care
- As we move toward a health care system that pays for high-quality care, CAHs will need to publicly report on quality measures to demonstrate the quality of the care they are providing
- HIT “meaningful use” will require all hospitals, including CAHs, to report data on selected quality measures to CMS to qualify for reimbursement incentives

A Performance Monitoring Resource for  
Critical Access Hospitals, States, and Communities

## *Why CAHs Should Publicly Report Quality Data*

---

- The long term viability of the Flex Program depends on having national data on program effectiveness
- Existing state and multi-state quality reporting and benchmarking efforts are important and should continue, but comparable national data are needed
- All CAHs need to report on a core set of measures the same way so the data are comparable nationally; should not be that difficult to accomplish but requires compromise
- Public reporting of quality data provides a richer environment for CAH benchmarking and QI

## *Using quality measure results to improve quality of care in CAHs*

---

- The Flex Medicare Beneficiary Quality Improvement Project (MBQIP) will identify areas where CAHs can improve their quality performance and focus QI activities on those areas
- MBQIP will involve cooperative efforts of ORHP, FMT, TASC and State Flex Programs
- Benefits for State Flex Programs and CAHs of participating in MBQIP include technical assistance regarding QI tools, models and best practices

## *Using quality measure results to improve quality of care in CAHs*

---

- Areas of focus and quality measures to be reported to MBQIP
  - Phase 1: Hospital Compare pneumonia and heart failure measures
  - Phase 2: Hospital Compare outpatient AMI/chest pain measures, outpatient surgical measures (if applicable) and HCAHPS
  - Phase 3: Pharmacist CPOE/24 hour verification of medication orders and outpatient transfer communication measures

## *Using quality measure results to improve quality of care in CAHs*

---

- There is an evidence base on QI programs and strategies that have improved quality of care and could be replicated in CAHs
  - Current FMT project is identifying evidence-based QI programs/strategies for pneumonia, heart failure, AMI, and surgical care improvement, using literature and interviews
  - Information on these programs/strategies will be disseminated to State Flex Programs and CAHs through a series of policy briefs with links to resources
